Regarding: Cedar Springs Mine, M/023/059

My attempts to obtain maps of the Cedar Springs Mine area have not produced the results that I desired. The contour intervals are still too close to provide adequate space to plot the detail of our mining operation. Due to the wet winter and spring conditions I have not been able to proceed again to obtain more suitable information. I will proceed with this project as the mine area dries up.

It is still one of my priorities to provide the required information so the permit process can proceed. This mine has not been active for approximately 2 years. There are no new disturbances at this site. Please call with any questions.

Sincerely,

Nephi Sandstone
